

## PTFIX distribution blocks

The PTFIX distribution blocks comprise the largest distribution block portfolio of Phoenix Contact. The blocks are characterized by the simple Push-in direct-connection technology and the FIX factor (PTFIX). The FIX factor implies simple arranging in rows, integrated bridging, and fast setup due to the wide range of mounting options for the distribution block system. The FIX factor therefore stands for quick and easy mounting and installation.

PTFIX – simply unpack, connect, and you're done!

### Your advantages

- ✓ Fast installation with ready-to-connect blocks
- ✓ Significant space savings due to the minimal size
- ✓ Flexible mounting options
- ✓ Intuitive installation due to the wide range of colors
- ✓ Standardized accessories – CLIPLINE complete

### Color versions

In the following product tables, the reference items listed are the standard gray color version. You will find the color versions of the individual blocks in our online shop or in the online configurator.

The PTFIX distribution blocks are available in 11 basic and three special colors.

## PTFIX distribution blocks with Ex e approval

These FIX distribution blocks have additional Ex e approval. They are part of the FIX block system, so feature the same advantages as all distribution blocks and use the identical standardized FIX accessories.

### Your advantages

- ✓ Certification in accordance with Ex e
- ✓ Fast installation with ready-to-connect blocks
- ✓ Flexible mounting options
- ✓ Intuitive installation due to the wide range of colors
- ✓ Standardized accessories – CLIPLINE complete

### Color versions

In the following product tables, the reference items listed are the standard gray color version.

The distribution blocks with Ex approval are also available in blue. You will find the blue versions in the online shop or in the configurator.

Distribution blocks

## Explosion protection

Explosion protection around the world is mainly based on the IEC 60079 series of international standards and European and American standards and directives. In North America, the basis for this is the National Electric Code (NEC) in the USA and the Canadian Electrical Code (CEC) in Canada. Directive 2014/34/EU (previously ATEX 100a) is of particular importance to manufacturers of devices and protective systems within CENELEC countries of the European Union and beyond. We meet international requirements with IECEx certificates. This means that use with the "increased safety" Ex eb type of protection is permitted in zone 1 and 2. However, this is only under the condition that the distribution blocks are installed in housings that are qualified and certified for the respective type of protection. The protection principle of the increased safety "e" type of protection (IEC/EN 60079-7) is essentially based on stricter design measures.
